

CONCRETE REPAIR FOR EXISTING CONSTRUCTION

INCAP CRACK REPAIR SYSTEM (ICRS)

Unlike other concrete crack repair systems, Technokotes' INCAP Crack Repair System protects from any direction, even against high water pressure. Because the system can be applied to either side of the concrete, there are no limits when it comes to repairing or waterproofing hard or impossible to reach areas. Using INCAP PLUG, INCAP GP and INCRETE, Technokotes INCAP Crack Repair System can be put to work wherever the crack are found and is truly the only permanent crack repair system.

INCAP PLUG: A powder that, when mixed with water, can be used to immediately stop water flow through concrete cracks.

INCAP GP: A cementitious, brush-applied treatment for concrete that contains Technokotes' renowned integral crystalline waterproofing chemicals.

INCRETE: A fast-setting waterproof grout designed to repair leaking cracks, holes and joints.

Packaging

INCAP PLUG, INCAP GP and INCRETE are available in 5 kg or 25 kg re-sealable pails or paper bags

Applications

Use INCAP PLUG, INCAP GP and INCRETE together to repair leaking cracks in concrete. Components of the system can also be used to:

- Repair leaking cracks or construction joints
- Repair spalled or honeycombed concrete
- Firmly anchor bolts and ornamental iron
- Use as a waterproof plaster on masonry walls
- Seal around pipes and metal fixtures in masonry concrete
- Plug and seal construction form tie holes
